EDUCATION

Brunel University of London

Dec 2025

*BEng (Hons) Computer Systems Engineering — Expected 2:2**Uxbridge, Middlesex*

EXPERIENCE

Heat Pipe and Thermal Management Research Group

Apr 2024 – Jul 2024

*Systems Design Engineer Intern**Uxbridge, UK*

- Engineered control panels for heat pumps and energy systems; prepared **P&ID** diagrams for secure and efficient operation.
- Managed tools/equipment inventory in **Excel**; improved asset tracking and safeguarding practices supporting operational integrity.

Professional Development Centre, Brunel University of London

May 2023 – Jul 2023

*Brunel Career Ambassador**Uxbridge, UK*

- Supported PDC events (materials, banner setup, attendee support).

Complex Creatives (Digital Marketing Agency)

Jun 2021 – Aug 2021

*Junior WordPress Developer Intern**London, UK*

- Learned how to implement WordPress sites from client designs using **WPBakery**; collaborated with marketing and design teams.
- Studied security/eCommerce best practices via Coursera/HubSpot Academy to improve plugin & site hardening.

PROJECTS

Banking & Supermarket Management Systems (GUI)

Java, Swing, OOP, UML 2.0

- Built front-end desktop applications for banking and supermarket management system workflows with **object-oriented** design and access control, with a back-end database for storing users' personal details.
- Produced UML 2.0 Diagrams (use case, sequence, class relationships) to document system behaviour and roles (e.g., Bank Manager).

Tiny-ML Occupancy Monitoring on Edge

Python, TensorFlow Lite, Conv1D CNN, React, Linux OS

- Developed a Binary Occupancy Detector with **Conv1D CNN** deployed via **TensorFlow Lite** on-device (RPI 5), and performed Time-Series Analysis to predict Target values.
- Applied minimal-dataset strategy across first/third-party data; reported **up to 95%** accuracy (dataset-dependent). Used a **linear Naive Bayes** step for lightweight feature compression/selection.

Cloud/Edge - IoT Dot-Tracking System

Python, Wireshark, GCP (Linux VM)

- Tracked red-dot motion ($\Delta x, \Delta y$), using OpenCV enabled script from a webcam stream, on a Remote RPi over Wi-Fi to Local RPi; monitored TCP/IP packets with **Wireshark**.
- Used a **Google Cloud Platform CLI** Linux VM using SSH keys for Fully-Remote streaming. Utilized x2go Client for remote streaming, and GUI; validated reliability of live video data paths.

TECHNICAL SKILLS

Programming Languages:

Python, C, C++, Java, HTML5, CSS, JavaScript, Assembly

Frameworks/Libraries:

React, TensorFlow, OpenCV, Swing

Tools/Platforms:

GitHub, VS Code, MPLAB X IDE, Apache NetBeans, Google Cloud Platform

ACHIEVEMENTS & LEADERSHIP

Certifications:Process Mining - Celonis Digital Academy - **2025**Finance Fundamentals with CFI - DataCamp - **2025****Competitions:**Luffa & Endless Blockchain Track, Brunel Blockchain Society Hackathon - **2024**ICPC UK and Ireland Programming Contest - **2023**Brunel R. E. A. D. Y. Programme - **2024****Course/Student Representative**Brunel University of London - **2025**Waltham Forest College - **2022****Mentoring Programmes:**Graduate Aspirations Programme - **2025**Brunel Professional Mentoring Scheme (Goldman Sachs) - **2025**
